Phase 3 - Project Design

Project: ComicCraft - AI Comic Story Creator **Team ID / members:** Fill in your team's details

Problem-solution fit

Canvas area	ComicCraft finding
Customer segment	Students, hobby writers, teachers, and beginner comic creators
Pains	Drawing multiple scenes is slow; beginner creators may struggle to structure a story
Triggers	Class assignment, story idea, creative activity, or shareable post
Desired outcome	A readable sequence with illustrations and a printable file
Existing alternatives	Draw manually, use a general image generator, or hire an illustrator; each requires more time or skills
Limitations	Internet and API availability for hosted generation; API usage may have cost or rate limits
Proposed solution	Guided form, five-panel story generation, image service, preview, and PDF export
Root cause addressed	Writing, illustration, and page layout are separate tasks for a beginner

Proposed solution

The user submits a prompt and story settings through a web form. FastAPI validates the input. The comic service requests structured story content from Gemini if a key is configured; otherwise it supplies demo behavior. Each panel receives an illustration request. Hugging Face can provide hosted images when configured, with a local fallback for the demo path. The page builder validates and assembles the five panels, and the PDF service makes a downloadable copy.
