Phase 7 - Project Documentation and Deliverables

Project: ComicCraft - AI Comic Story Creator **Team ID / members:** Fill in your team's details

Executable/source submission checklist

Item	Included / status	Notes
Source code	Yes	`app/`, `templates/`, `static/`
Setup guide	Yes	`README.md` in project source
Dependency list	Yes	`requirements.txt`
Environment template	Yes	`.env.example`; contains no real keys
Real `.env` credentials	Excluded	Each student configures their own private local file
Database schema	N/A	Current prototype uses local output files and no database
Hosted URL	Not provided	Local development URL is not a public deployment
Tests and measured performance results	Pending	Fill in from Phase 6
Demo video	Optional / not provided	Add link if your course requires one
Completed project-template forms	Included as Markdown companions	Original blank PDFs are retained for reference

Local installation guide

From the project root in VS Code PowerShell:

```
py -m venv .venv
.venv\Scripts\Activate.ps1
python -m pip install --upgrade pip
pip install -r requirements.txt
Copy-Item .env.example .env
uvicorn app.main:app --reload
```

Open `http://127.0.0.1:8000`. Stop the development server with Ctrl+C in its terminal. For multiple local copies, use a different port for each, for example `uvicorn app.main:app --reload --port 8001`.

Environment configuration

Set `GEMINI_API_KEY` for hosted story generation and `HF_API_KEY` for hosted image generation in the private `.env`. Keep `.env` private. The exact optional model names and defaults are described in `.env.example` and the source README. Restart the server after changing environment configuration.
